## Company Information Guide

### COMPANY REFERENCE

A consolidated reference covering NovaDesk company facts, subscription plans, billing policies, support service levels, permissions, security, integrations, onboarding, and common customer questions.

**Document version:** 1.0 | **Published:** 16 September 2026 | **Language:** English

## Contents

1. Company Overview
2. Plans and Pricing
3. Billing, Invoices, and Refunds
4. Support Levels and Service-Level Targets
5. User Roles and Permissions
6. Security, Data Retention, and Backups
7. Integrations and API Limits
8. Troubleshooting Guide
9. Technical Escalation Process
10. Customer Onboarding
11. Frequently Asked Questions
12. Glossary

**This guide is intended as a practical company reference for employees, partners, and customers who need consistent information about NovaDesk products and operating policies.**

# 1. Company Overview

NovaDesk Software Ltd. provides a cloud-based customer operations platform for small and mid-sized companies. The platform combines shared inboxes, customer records, workflow automation, reporting, and integrations in one workspace.

## Core facts

- **Legal name:** NovaDesk Software Ltd.
- **Headquarters:** Dublin, Ireland.
- **Regional offices:** Cairo, Egypt and Lisbon, Portugal.
- **Primary customer segment:** companies with 20 to 500 employees.
- **Primary industries:** e-commerce, professional services, education technology, and logistics.
- **Standard service availability target:** 99.9% monthly uptime, excluding scheduled maintenance.

## Product terminology

A **workspace** is the top-level customer environment. Each workspace can contain teams, channels, users, automations, customer records, and reporting dashboards. A customer may own more than one workspace, but billing is calculated separately for each workspace.

**NovaDesk is a cloud-only service and does not offer on-premise deployment.**

# 2. Plans and Pricing

| Plan       | Monthly price per active seat | Minimum seats | Key inclusions                                                                         |
|------------|-------------------------------|---------------|----------------------------------------------------------------------------------------|
| Starter    | \$18                          | 3             | Shared inbox, basic reporting, 5 automations, email support                            |
| Growth     | \$34                          | 5             | Everything in Starter, 50 automations, CRM sync, advanced reports, priority support    |
| Enterprise | Custom                        | 25            | Everything in Growth, SSO/SAML, SCIM, audit export, sandbox, dedicated success manager |

## Pricing rules

- Seats are billed for users marked **Active** during the billing period.
- Suspended users are not billed after the next daily billing sync.
- Guest users are free but cannot access reporting, billing, or automation settings.
- Annual subscriptions receive a 15% discount compared with equivalent monthly billing.
- Taxes are added where required by the customer billing location and tax status.

**Example:** A Growth workspace with 12 active seats costs \$408 per month before taxes: 12 seats x \$34. If billed annually, the pre-tax annual price is \$4,161.60 after the 15% annual discount.

# 3. Billing, Invoices, and Refunds

Invoices are generated at the start of each billing period. Monthly plans renew on the same calendar day as the original subscription start date. Annual plans renew on the subscription anniversary date.

## Payment rules

- Accepted payment methods: Visa, Mastercard, American Express, and bank transfer for Enterprise contracts.

- Failed card payments enter a 7-day grace period.
- During the grace period, the workspace remains fully accessible.
- If payment is still unresolved after 7 days, the workspace becomes read-only.
- After 30 days of non-payment, the workspace may be scheduled for suspension.

## Refund policy

NovaDesk does not provide prorated refunds for partial months after cancellation. A full refund may be approved when a duplicate charge is confirmed, when a billing error was caused by NovaDesk, or when a customer cancels a first-time annual subscription within 14 calendar days of purchase and has used fewer than 20 agent-hours in the product.

A plan downgrade takes effect at the next renewal. A plan upgrade takes effect immediately and the price difference is prorated for the remaining billing period.

## 4. Support Levels and Service-Level Targets

| Priority      | Definition                                           | Starter          | Growth          | Enterprise       |
|---------------|------------------------------------------------------|------------------|-----------------|------------------|
| P1 - Critical | Production unavailable for most users; no workaround | 4 business hours | 1 hour          | 30 minutes       |
| P2 - High     | Major feature impaired; significant business impact  | 1 business day   | 4 hours         | 2 hours          |
| P3 - Normal   | Limited impact, question, or workaround available    | 2 business days  | 1 business day  | 8 business hours |
| P4 - Low      | How-to request, cosmetic issue, or enhancement idea  | 3 business days  | 2 business days | 1 business day   |

### Support hours

Starter support operates Monday to Friday, 09:00-17:00 UTC, excluding public holidays in Ireland. Growth support operates Monday to Friday, 07:00-19:00 UTC. Enterprise P1 support is monitored 24x7; lower-priority Enterprise tickets follow the Growth support window.

**Response targets refer to the first meaningful human response and are not guaranteed resolution times.**

## 5. User Roles and Permissions

| Role    | View conversations | Edit automations | Invite users | View billing | Export audit log |
|---------|--------------------|------------------|--------------|--------------|------------------|
| Owner   | Yes                | Yes              | Yes          | Yes          | Yes              |
| Admin   | Yes                | Yes              | Yes          | No           | Yes              |
| Agent   | Yes                | No               | No           | No           | No               |
| Analyst | Read-only          | No               | No           | No           | No               |
| Guest   | Limited            | No               | No           | No           | No               |

### Role details

Only workspace Owners can change the billing contact, cancel the subscription, or transfer workspace ownership. Admins may manage teams, channels, integrations, automations, and users, but cannot access billing settings. Analysts can open reports and view conversation content in read-only mode when granted team access.

## 6. Security, Data Retention, and Backups

### Security controls

- Data in transit uses TLS 1.2 or higher.
- Application data at rest is encrypted using AES-256.
- Enterprise supports SAML 2.0 single sign-on and SCIM user provisioning.
- Two-factor authentication can be enforced on Growth and Enterprise plans.
- Administrative actions are recorded in the audit log.

### Retention

- Conversation content: retained for the lifetime of the workspace unless deleted by the customer.
- Deleted conversation content: soft-deleted for 30 days before permanent purge.

- Audit logs: 180 days on Growth; 365 days on Enterprise.
- Security event logs: retained internally for 400 days.
- Backups: encrypted daily snapshots with a 35-day rolling retention window.

## Recovery objectives

The platform target Recovery Point Objective (RPO) is 24 hours for standard disaster recovery. The target Recovery Time Objective (RTO) is 8 hours for a region-wide incident. These targets describe disaster-recovery objectives and are not standard support resolution guarantees.

# 7. Integrations and API Limits

## Native integrations

- **CRM:** HubSpot and Salesforce.
- **Messaging:** Slack and Microsoft Teams.
- **Commerce:** Shopify and WooCommerce.
- **Identity:** Okta and Microsoft Entra ID for Enterprise SSO.
- **Automation:** Zapier and Make through public connectors.

## API limits

Starter workspaces receive 60 API requests per minute. Growth workspaces receive 300 requests per minute. Enterprise workspaces receive 1,200 requests per minute by default and may request a higher contracted limit. Rate limits are applied per workspace, not per user or token.

## Webhook behavior

Webhook deliveries are retried up to 6 times using exponential backoff. A webhook endpoint that continues to return 4xx or 5xx responses for 24 hours is automatically disabled. Re-enabling a disabled endpoint requires an Admin or Owner.

## 8. Troubleshooting Guide

| Symptom                       | Likely cause                                           | Recommended checks                                                              |
|-------------------------------|--------------------------------------------------------|---------------------------------------------------------------------------------|
| Email replies are not sending | Expired channel token or provider outage               | Check channel status, reconnect mailbox, verify provider status page            |
| Notifications arrive late     | Browser sleeping or notification queue delay           | Confirm browser permissions, disable aggressive battery saver, test desktop app |
| CRM records are not updating  | Field mapping error or API rate limit                  | Review sync log, verify required fields, check rate-limit warnings              |
| User cannot log in with SSO   | Identity provider mismatch or unassigned user          | Confirm SAML entity ID, assigned app group, and user email match                |
| Reports look incomplete       | Date filter, team filter, or archived channel excluded | Reset filters and include archived channels where relevant                      |

### Troubleshooting order

- Confirm whether the issue affects one user, one team, or the entire workspace.
- Check the NovaDesk status page and the relevant third-party provider status.
- Reproduce the issue in a private browser window or alternate network when applicable.
- Capture exact timestamps, affected user IDs, workspace ID, and any visible error code.
- Escalate only after the minimum evidence listed in the Technical Escalation Process has been collected.

## 9. Technical Escalation Process

Escalate a case to Engineering when at least one of the following is true: a reproducible product defect is confirmed, a P1 incident affects multiple customers, a data-integrity issue is suspected, or a security-sensitive behavior requires technical investigation.

### Minimum escalation package

- Workspace ID and affected user IDs.
- Exact UTC timestamps for at least one failed attempt.
- Steps to reproduce and expected versus actual behavior.
- Screenshots or screen recording when visual behavior is relevant.
- Request ID, error code, or API response body when available.
- Troubleshooting already completed and its result.

**Do not include passwords, full payment card numbers, private keys, access tokens, or customer secrets in support tickets or engineering escalations.**

## 10. Customer Onboarding

| Phase         | Timing     | Typical activities                                                     |
|---------------|------------|------------------------------------------------------------------------|
| Kickoff       | Days 1-3   | Confirm goals, owners, success metrics, channels, and migration scope  |
| Configuration | Days 4-10  | Create teams, connect channels, set roles, configure basic automations |
| Migration     | Days 7-14  | Import customer records and selected historical conversation data      |
| Training      | Days 10-20 | Admin training, agent training, reporting walkthrough                  |

| Phase        | Timing     | Typical activities                                           |
|--------------|------------|--------------------------------------------------------------|
| Go-live      | Days 15-25 | Enable live routing, monitor queues, fix configuration gaps  |
| Optimization | Days 21-30 | Review adoption, SLA trends, automation usage, and reporting |

Enterprise onboarding may include a sandbox workspace, SSO setup, SCIM provisioning, security review, and a jointly approved rollout plan. Starter customers receive self-service onboarding materials rather than a dedicated implementation manager.

## 11. Frequently Asked Questions

### Can a customer pause a subscription?

No. NovaDesk does not support temporary subscription pauses. A customer may downgrade or cancel at renewal, subject to the billing rules in this guide.

### Can a customer export its data?

Yes. Owners and Admins can export contacts and conversations in CSV or JSON. Enterprise customers can also schedule recurring exports to approved cloud storage.

### Is there a free plan?

No. NovaDesk offers a 14-day trial but no permanent free tier.

### Does the 14-day trial require a credit card?

No. A payment method is required only when the customer chooses a paid plan.

### How many workspaces can one user join?

There is no product limit. A user can belong to multiple workspaces if invited to each one separately.

### Can deleted users be restored?

A deactivated user can be reactivated. A permanently deleted user account cannot be restored, but historical conversation ownership remains preserved.

### Can support staff see customer content?

Access is restricted and audited. Authorized support personnel may access limited customer data only when required to resolve a support request or investigate an incident.

### Does NovaDesk support custom domains?

Yes. Enterprise customers can request a custom help-center domain after DNS validation.

## 12. Glossary

| Term            | Definition                                                                                         |
|-----------------|----------------------------------------------------------------------------------------------------|
| Active seat     | A user account marked Active and counted for subscription billing.                                 |
| Automation      | A rule that performs actions automatically when defined conditions are met.                        |
| Channel         | A connected source of customer communication, such as an email inbox or commerce integration.      |
| Guest           | A limited-access user who is not billed as an active seat.                                         |
| P1              | Critical support priority for widespread production unavailability with no workaround.             |
| Read-only state | Workspace state in which users can view data but cannot create or modify operational records.      |
| SCIM            | A standard used to automate identity provisioning and deprovisioning.                              |
| Workspace       | The top-level NovaDesk customer environment containing teams, users, channels, settings, and data. |
